Table S2: Tools employing multi-omics data to predict diagnostic, prognostic, predictive, and personalized markers.

Tools	Description	URL	Pro/Con	Ref
	Diagnostic Biomark	er-based Tools		
HCCPred	Machine learning prediction models	http://webs.iiitd	Pro: Simple web-based	[55]
	predict and differentiate the liver	.edu.in/raghava	machine prediction tool	
	hepatocellular carcinoma and normal	/hccpred/	based on very large	
	liver samples based on a three-genes		cohort of nearly 4,000	
	(CLEC1B, PRC1, and FCN3)		samples.	
	biomarker. This biomarker validated			
	on 4 external datasets.			
CancerLSP	Predicts the early and late stage of	http://webs.iiitd	Pro: Simple web-based	[66]
	liver cancer samples using	.edu.in/raghava	machine prediction tool.	
	transcriptomics and epigenomics	/cancerlsp/	Con: It is based on only	
	biomarkers. Here, prediction models		TCGA-LIHC data.	
	developed using 21 methylation CpG			
	sites, 30 RNA transcripts and 51			
	hybrid features (include both 21			
	methylation CpG sites and 30 RNA			
	transcripts), independently.			

CancerCSP	ML-based model predicts the early	https://webs.iiit	Pro: Simple web-based	[65]
	-		-	[00]
	and late-stage ccRCC patients using	d.edu.in/raghav	machine prediction tool.	
	gene expression-based signatures.	<u>a/cancercsp/</u>	Con: It is based on only	
	Prediction module integrated in the		TCGA dataset.	
	webserver based the key signature			
	genes sets, i.e. 64 and 38 genes.			
	genes sens, not en una de genes.			
CancerTSP	ML-based model predicts the early	http://webs.iiitd	Pro: Simple web-based	[51]
	and late-stage of papillary thyroid	.edu.in/raghava	machine learning	
	carcinoma using RNA expression	/cancertsp/	prediction tool.	
	profiles of signature 36 RNA		Prediction models also	
	transcripts. These 36 RNA transcripts		validated on	
	signature identified based on 500		independent dataset.	
	samples of TCGA dataset.			
CancerSPP	Predicts skin cutaneous melanoma	https://webs.iiit	Pro: Simple web-based	[57]
		-	•	[37]
	progression using multi-omics		machine learning	
	signatures. Here, different panels of	<u>a/cancerspp/</u>	prediction tool.	
	biomarker sets (17 RNA, 32miRNAs,		Con: It is based on only	
	38 methylation features) that can		TCGA dataset	
	classify samples into primary and			
	metastatic categories independently			
	implementing various machine			
	learning algorithms.			

CancerUBM	Web-bench for predicting the cancer	https://webs.iiit	Pro: Simple web-based	[67]
	status from proteomic data.	d.edu.in/raghav	machine learning	
		a/cancerubm/	prediction tool.	
			Con: Insufficient data	
			for patients.	
BBcancer	An expression atlas of the blood-	http://bbcancer.	Pro: It is one of the	[68]
	based biomarker for early diagnosis	renlab.org/	largest blood sample	
	of cancers. It contains expression data		resource for cancer	
	of the six RNA types (19,612		biomarker research.	
	mRNAs, 10,918 lncRNAs, 60,306			
	circRNAs, 2568 miRNAs, 1231			
	piRNAs and 43,459 tRFRNAs) from			
	5040 normal and tumor blood			
	samples across 15 cancer types.			
	Prognostic Biomarl	ker-based Tools		
OScc	Assess and evaluate the prognostic	http://bioinfo.hen	Pro: User will get	[69]
	biomarker potential in cervical	u.edu.cn/CESC/	output in the form of	
	cancer based on 690 patients.		Kaplan - Meier survival	
			curves with log-rank p-	
			value and hazard ratio	
			for given gene.	

OSluca	Server to evaluate the prognostic	http://bioinfo.hen	Pro: They evaluated	[63]
	biomarkers for lung cancer	u.edu.cn/LUCA/	104 previously reported	
			prognostic biomarkers	
			for lung carcinoma	
SKCMhrp	A web-bench for stratification of	https://webs.iiitd.	Pro: Simple web-based	[56]
	patients in high/low-risk groups	edu.in/raghava/s	prediction tool based on	
	using HLA-superallele and clinical	kcmhrp/	HLA superalleles and	
	characteristics for SKCM patients.		clinical factors. It is also	
	Here, they identified 14 HLA		validated on	
	superalleles and three clinical and		independent dataset.	
	demographic factors using survival		Con: Signatures derived	
	analysis and machine methods		from the low-resolution	
	based on 401 SKCM samples from		HLA alleles.	
	the TCGA data			
CMcrpred	Predict risk in cutaneous melanoma	http://webs.iiitd.e	Pro: Simple web-based	[54]
	patients based on clinical features	du.in/raghava/cm	prediction tool based on	
	(TNM staging, Breslow Thickness	crpred/	clinical characteristics	
	and Ulceration status) of patients.		of patients.	
			Con: It is not validated	
			on independent dataset.	
CRCRpred	Stratify patients in high/low-risk	https://webs.iiitd.	Pro: Simple web-based	[53]
		-	•	

	cohorts using proteomic profiles of	edu.in/raghava/cr	prediction tool based on	
	mitochondrial apoptotic proteins	<u>crpred/</u>	expression of 5	
	[one or upto five apoptotic proteins		apoptotic proteins.	
	(Bak, Bax, Bcl2, BclXL or Mcl1)		Con: Prediction model	
	and clinical data for colorectal		not validated on	
	cancer.		independent dataset.	
OSbrca	Breast cancer prognostic biomarker	http://bioinfo.hen	Pro: It integrates 48	[70]
	investigation with massive data	u.edu.cn/BRCA/	cohorts that contain	
	from tens of cohorts. Here, authors		more than 7,400 patients	
	employed gene expression data of		with RNA-sequencing	
	7,400 patients obtained from the		and gene microarray	
	TCGA and GEO.		data.	
			Con: The loss of	
			different platform	
			integration, lacking	
			noncoding gene	
			information.	
PROGgene	Integrative tools for prognostic	http://www.comp	Pro: It allows	[71]
	biomarker identification from 134	bio.iupui.edu/pro	performing Survival	
	cohorts among 21 cancer types. It	ggene	analysis based on a)	
	gives a facility for the users to select		single gene b) multiple	

	gene signatures of interest from		genes as a signature, c)	
	nearly 10,000 published or curated		ratio of expression of	
	gene signatures compiled from the		two genes, and d)	
	molecular signature database.		curated/published gene	
			signatures.	
			Con: Website is	
			unstable and currently	
			unavailable.	
SurvExpress	A resource encompassing nearly	http://bioinforma	Pro: User-friendly	[72]
	20,000 samples and 130 datasets	tica.mty.itesm.m	interface to analyze	
	with censored clinical information	x/SurvExpress	prognostic potential of	
	covering tumors over 20 tissues. It		genes among cancer	
	provides tools for risk assessment		different cohorts.	
	and survival analysis.		Con: It is not updated	
			after the development in	
			2013.	
PRECOG	Web resource encompasses	http://precog.stan	Pro: large number of	[73]
	genomic and clinical data for nearly	<u>ford.edu</u>	cohorts used prognostic	
	18,000 human tumors samples		potential of genes.	
	across 39 malignancies. Associated		Besides, prognostic	
	tools facilitate to delineate		potential of 22 immune	
	prognostic genes and leukocyte		subset signatures	

				1
	subsets within and across cancers.		elucidated among 25	
			cancer types.	
			Con: It is not updated	
			after the development in	
			2015.	
PrognoScan	It is a webresource that encompass	http://gibk21.bse.	Con: Website is not	[74]
	40 publicly available datasets with	kyutech.ac.jp/Pro	stable and database was	
	clinical annotation for 9 cancer	gnoScan/index.ht	not updated.	
	types, as well as 2) a tool for	<u>ml</u>		
	assessing the prognostic potential of			
	markers.			
GSCAlite	Webserver integrating various	http://bioinfo.life	Pro: One of the most	[75]
GSCAlite	Webserver integrating various modules that offer different types of	http://bioinfo.life hust.edu.cn/web/	Pro: One of the most comprehensive tool for	[75]
GSCAlite		-		[75]
GSCAlite	modules that offer different types of	.hust.edu.cn/web/	comprehensive tool for	[75]
GSCAlite	modules that offer different types of data analyses including differential	.hust.edu.cn/web/	comprehensive tool for multi-omics data	[75]
GSCAlite	modules that offer different types of data analyses including differential gene expression, overall survival,	.hust.edu.cn/web/	comprehensive tool for multi-omics data analyses to scrutinize	[75]
GSCAlite	modules that offer different types of data analyses including differential gene expression, overall survival, single nucleotide variation, copy number variation, methylation,	.hust.edu.cn/web/	comprehensive tool for multi-omics data analyses to scrutinize	[75]
GSCAlite	modules that offer different types of data analyses including differential gene expression, overall survival, single nucleotide variation, copy number variation, methylation, pathway analyses, miRNA	.hust.edu.cn/web/	comprehensive tool for multi-omics data analyses to scrutinize	[75]
GSCAlite	modules that offer different types of data analyses including differential gene expression, overall survival, single nucleotide variation, copy number variation, methylation, pathway analyses, miRNA regulation, and drug sensitivity, etc.	.hust.edu.cn/web/	comprehensive tool for multi-omics data analyses to scrutinize	[75]
GSCAlite	modules that offer different types of data analyses including differential gene expression, overall survival, single nucleotide variation, copy number variation, methylation, pathway analyses, miRNA regulation, and drug sensitivity, etc. It holds multi-omics data from	.hust.edu.cn/web/	comprehensive tool for multi-omics data analyses to scrutinize	[75]
GSCAlite	modules that offer different types of data analyses including differential gene expression, overall survival, single nucleotide variation, copy number variation, methylation, pathway analyses, miRNA regulation, and drug sensitivity, etc. It holds multi-omics data from different resources, i.e. 11,160	.hust.edu.cn/web/	comprehensive tool for multi-omics data analyses to scrutinize	[75]
GSCAlite	modules that offer different types of data analyses including differential gene expression, overall survival, single nucleotide variation, copy number variation, methylation, pathway analyses, miRNA regulation, and drug sensitivity, etc. It holds multi-omics data from	.hust.edu.cn/web/	comprehensive tool for multi-omics data analyses to scrutinize	[75]

	TCGA, 746 drug data from Genomics of Drug Sensitivity in Cancer (GDSC) and Cancer Therapeutics Response Portal			
	(CTRP) (Drug Sensitivity), and normal tissue expression data of 11 688 samples from GTEx.			
CaPSSA	A platform for detection of the prognostic potential of a patient subgroup based on gene expression and mutation data. It also allows association of patient group with clinical factors and annotated molecular types.		Pro: User-friendly interactive platform.	[76]
MEXPRESS	Webtool for analysis and visualization of gene expression, methylation, and patient survival data from the TCGA.	https://mexpress. be	Pro: It provides facility to analyze DNA methylation data w.r.t. to its genomic location and other omics data, which is unique for this resource. Con: It has only TCGA	[77]

			data.	
PROGmiR	A platform for the exploration of	http://www.comp	Pro: It allows users to	[78]
	prognostic potential of 1054	bio.iupui.edu/pro	study overall survival in	
	miRNA in a total of 3117 pan-	<u>gmir</u>	form of prognostic plots	
	cancer samples across 16 major		using miRNA	
	cancer types.		expression data from	
			several publically	
			available patient series.	
SurvMicro	Assessment of prognostic potential	http://bioinforma	Pro: User-friendly	[79]
	of miRNA using multivariate	tica.mty.itesm.m	webtool for quick	
	analysis. It encompasses >40	x/SurvMicro	prognostic analyses of	
	cohorts in different tissues and have		miRNA.	
	a web tool to execute quick survival		Con: It not updated	
	analyses.		after it's development.	
OncoLnC	Interactive tool for assessing the	http://www.oncol	Pro: It is the resource	[80]
	survival correlation for lncRNA,	nc.org	that uses modern gene	
	miRNA, and mRNA on 21 cancer		definitions for TCGA	
	types. It encompasses survival data		mRNA and miRNA	
	for 8,647 patients from 21 cancer		data, and a single	
	studies performed by the TCGA.		resource for survival	

	<u> </u>	T		
			analysis of	
			MiTranscriptome beta	
			lncRNAs.	
			Con: It is based on only	
			TCGA Data	
TCPAv3.0	A comprehensive resource for the	https://bioinform	Pro: It is an interactive	[81]
	accessing, visualizing, and	atics.mdanderson	platform to explore and	
	analyzing functional proteomics of	.org/public-	analyze TCGA pan-	
	tumor samples. Tool for exploring	software/tcpa/	cancer RPPA-based	
	the survival correlation of mutation,		protein expression data.	
	SCNA, mRNA, miRNA,		Con: It holds the c pan-	
	methylation, protein RPPA data for		cancer RPPA data for	
	~8,000 patient samples of 32 cancer		nearly 260 protein	
	types.		markers.	
TRGAted	An open-source survival analysis	https://github.co	Pro: It is an interactive	[82]
	tool for 31 cancer type based on	m/ncborcherding	web application that	
	protein RPPA data.	/TRGAted	provides a graphical	
			user interface combining	
			survival information and	
			reverse-phase protein	
			array data from the	
			TCGA.	

CMcrpred	Tool for predicting the risk in	http://webs.iiitd.e	Pro: User-friendly web	[54]
	cutaneous melanoma based on	du.in/raghava/cm	server to predict risk	
	clinical features of patients. Clinical	crpred/	status inpatients based	
	factors that play vital role in the		on clinical factors.	
	predicting the survival of patients		Con: Based on only	
	include TNM staging, Breslow		TCGA data.	
	Thickness and Ulceration status			
CRCRpred	Stratify patients in high/low-risk	https://webs.iiitd.	Pro: Simple web-based	[53]
	cohorts using proteomic profiles of	edu.in/raghava/cr	prediction tool based on	
	mitochondrial apoptotic proteins	crpred	expression of 5	
	[one or upto five apoptotic proteins		apoptotic proteins.	
	(Bak, Bax, Bcl2, BclXL or Mcl1)		Con: Prediction model	
	and clinical data for colorectal		not validated on	
	cancer.		independent dataset.	
	Predictive/ Drug Bion	narker-based Tool	S	
CancerDP	Predicts priority/potency of an	https://webs.iiit	Pro: A simple	[83]
	anticancer drug against the cancer	d.edu.in/raghav	webserver-based tool for	
	cell line using its genomic features.	<u>a/cancerdp/</u>	anticancer drug	
	The drug sensitivity information for		prioritization, which is a	
	504 cell lines was captured from	ı	initial step towards	
	CCLE browse data section. The data	ı	personalized drug	
	includes IC50 (μM) for 24 anticancer	,	therapy for cancer.	

	drugs on 504 cell lines.		Con: It is based on cell	
			line data.	
CancerTOPE	A platform for designing genome-	https://webs.iiit	Pro: A simple web-	[84]
	based immunotherapy or vaccine	d.edu.in/raghav	based platform for	
	against the cancer cell. It hold a wide	a/cancertope/	predicting vaccine	
	various epitopes including B-cell,		candidates effective	
	CD8+ T-cell, HLA class I, HLA class		against cancer.	
	II against 60 cancer-specific vaccine		Con: It contains only	
	antigens. It has two major modules:		predicted epitopes,	
	(1) The database-specific service		which requires	
	maintains neoepitopes examined in		experimental validation.	
	905 cancer cell lines; (2) neoepitope-			
	based database facilitates a			
	demonstration for guiding the			
	generation of neoepitopes against a			
	tumor from its whole-genome.			
SCLC-	Tool for prioritization of drugs for	https://discover.	Pro: It provides a	[85]
CellMiner	small cell lung cancer based on	nci.nih.gov/Scl	unique resource of	
	transcriptomics and methylation	<u>cCellMinerCD</u>	patient derived SCLC	
	pattern. It integrates drug sensitivity	<u>B/</u>	cell lines characterized	
	and genomic data, methylomics and		comprehensively using	
	transcriptomics data from 118		multi-omics and drug	

	patient-derived small cell lung cancer		sensitivity	
	(SCLC) cell lines.		Con: It is based on cell	
			line data only.	
CancerDR	A resource for exploring the	https://webs.iiit	Pro: CancerDR is	[86]
	pharmacological profiling of	d.edu.in/raghav	integrated with a user-	
	anticancer drugs against 952 cancer	a/cancerdr/	friendly interface for	
	cell lines. It holds information of 148		extracting vital	
	anti-cancer drugs, and their		information from the	
	pharmacological profiling across 952		database.	
	cancer cell lines. It provides		Con: All the data is	
	comprehensive information, i.e.		derived from cell lines	
	sequence of natural variants,		only.	
	mutations, tertiary structure, and			
	alignment profile of mutants/variants			
	about each drug target.
